The Orca Alpha offers wetsuit swimming like you've never experienced before. The Nano SCS coating generates increased speed and buoyancy. You get amazing flexibility, fit and comfort from the Yamamoto #40 Cell neoprene, which has been shaped for maximum stretch across the shoulders and arms. Meanwhile, what lies beneath is just as important with the 4 Way Fibre Lining providing even more stretch and comfort. Panels of Yamamoto AeroDome neoprene have been placed on the front and rear of the torso, generating 30% more buoyancy.

The Orca 3.8 has unique Core Equilibrium panels of 5mm Yamamoto AeroDome neoprene that wrap completely around the torso area of the wetsuit. Using the buoyancy of hundreds of air cavities trapped within the neoprene, the Core Equilibrium panels lift your legs and torso into an optimum swimming position. HydroLift buoyancy cells, positioned on the sleeves of the speedsuit, lift your arms through the water, while the AquaTread forearm panel generates increased power with every stroke.

The Orca Sonar is constructed from performance level Yamamoto BioCell SCS neoprene, delivering exceptional buoyancy and flexibility. Perfect for intermediate level open water swimming, the Orca Sonar features the DeltaStretch Shoulder panel and HyperStretch Underarm, providing excellent range of movement and new DuoSmooth neck seal. HydroLift Body and Leg panels and a seamless torso provide buoyancy and keep the swimmer in an optimum position. The HydroStroke Forearm panel generates increased power with every stroke.

Orca's proven track record provides a solid platform for those serious about getting into open water swimming. Constructed of durable, performance-quality HydroCell neoprene, the Orca Equip gives the beginner the functions and features they need to improve their performance in the water. The Orca Equip has 1mm Yamamoto neoprene on the sleeves increasing comfort and flexibility. There is also a long john version that is 1mm all over. Making it perfect for warmer water conditions, and for those transitioning from pool swimming to the open water.

The Orca Equip Lite Fullsleeve is constructed from a unique 1mm Yamamoto SCS neoprene with flatlock stitching construction, to provide an ultra-flexible wetsuit perfect for warmer water conditions, and for those transitioning from pool swimming to open water swimming competition option.

The Orca S3 builds on the success of the popular, benchmark setting, entry level S1 and S2 wetsuits. Those taking their first steps with wetsuit swimming now benefit from features and materials previously only seen in intermediate level wetsuits. The S3 benefits from full Smoothskin neoprene coverage over the shoulder area, with the new 2mm QuadStretch shoulder panel. Another new addition to Orca's entry level wetsuit is the HydroStroke forearm panel, which uses a silicone print to increase power in the catch phase of the stroke. Constructed from a durable, flexible smoothskin, water-resistant neoprene, the S3 provides excellent buoyancy and thermal protection.
